ExpressSQL API

NAME	METHOD	PATH	JSON BODY key: datatype
READ TABLE	GET	/	- **table**: String - **all**: Boolean - **selectColumn**: {*cols*: [col_name], *present*: Boolean} - **where**: {*condition*: String, *present*: Boolean}, - **distinct**: {condition: String, present: Boolean}
CREATE TABLE	POST	/create/table	- **name**: String, - **columns**: [String]
UPDATE TABLE	PUT	/update/table	- **table**: String, - **type**: add | rename | alter_type | drop - **name**: String - **oldName**: String, - **dataType**: String,
DROP TABLE	DELETE	/drop/table	- **table**: String
INSERT ROW	POST	/create/row	- **table**: String - **cols:** Array[] of column names - **values**: Array[] of values
UPDATE ROW	PUT	/update/row	- **table**: String, - **cols**: [col_names] - **newValues** = [values] - **where**: String,
DROP ROW	DELETE	/drop/row	- **table**: String - **where**: String

Success Response

Status code: 200

Response Type: JSON

Response Data: {results: Array | Object}

Failure Response

Status code: 500

Response Type: JSON

Response Data: {error: String}
